Maine CDC COVID-19 Dashboard Collaboration

Maine Department of Health and Human Services
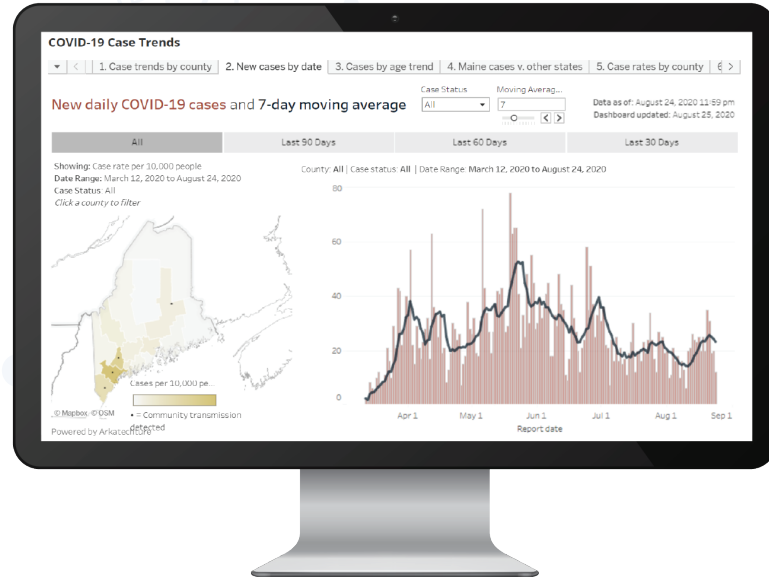

Maine CDC
Maine Center for Disease Control and Prevention
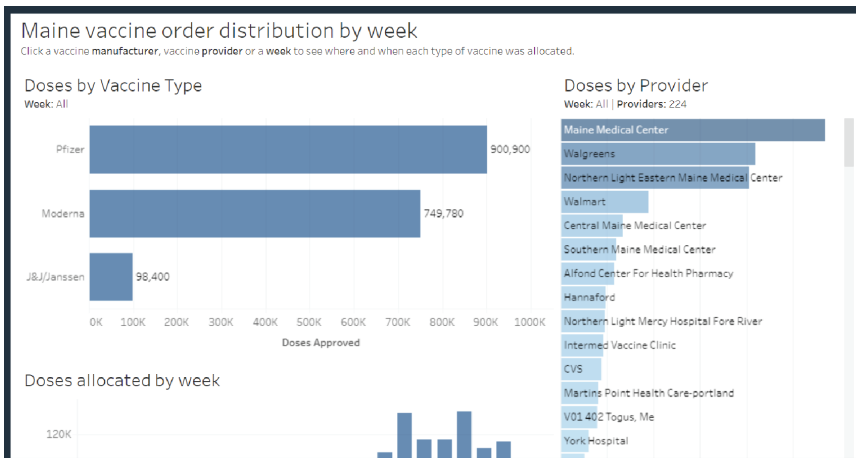

Utilizing Data For Good

In the midst of the COVID-19 pandemic, the Maine CDC worked with Arkatechture to develop dashboards to show:

- COVID-19 cases by zip code
- Deaths by age and date
- Daily testing and positivity rate
- Weekly vaccine distribution

Project Results

The collaboration between the Maine CDC and Arkatechture provided clear and accessible time series breakdowns of coronavirus cases segmented by geography, age and population-adjusted rates. This project demonstrates the importance of data and visualization to communicate information to key stakeholders and the public.

As states and local regions struggled to balance public safety against relaxing economic restrictions, it was data visualization -- backed by epidemiology, statistics and data science that played a key role in determining when and how government officials could safely do so.
